SUMMARY

Backend Engineer with experience building scalable backend systems in enterprise and product-driven environments. Specialized in **Golang**, **REST/gRPC APIs**, and **system design**, with hands-on experience improving performance, scalability, and reliability of production systems. Strong background in translating business requirements into robust technical solutions.

EXPERIENCE

Bootcamp Trainee, Enigma Camp

Oct 2019 – Feb 2020

| Jakarta

- Completed an intensive software engineering bootcamp focused on building strong programming fundamentals and professional development practices.
- Built backend services using **Spring Boot** and applied **SOLID principles**, **OOP**, and **TDD**.
- Developed frontend applications using **React.js** as part of team-based projects simulating real-world workflows.

API Gateway Operational, Bank Rakyat Indonesia Tbk

Mar 2020 – Jun 2021

| Jakarta

- Supported large-scale API gateway operations handling high-volume enterprise traffic.
- Built automation tools using **Golang** to eliminate repetitive operational reporting, reducing manual effort and error rates.
- Designed fraud indicator alerts based on API request and response patterns from **Apigee** logs.
- Integrated monitoring data from **ELK Stack** into automated reporting pipelines delivered to **Telegram** and **Google Spreadsheet**.

Backend Engineer, Bussan Auto Finance

Jul 2021 – Oct 2022 |

Jakarta

- Developed and maintained the **Pradana** backend product supporting loan-related business processes.

- Implemented core business logic and data persistence for financial workflows with transactional consistency.
- Improved reliability of user communication by implementing **Firebase Cloud Messaging (FCM)** for real-time loan status notifications.
- Optimized **PostgreSQL** queries to support growing transaction volume.

Software Developer, Tekno Gemilang Indonesia

Sep 2021 – Oct 2022

| Jakarta

- Contributed to backend systems for a travel platform (Bayu Buana) supporting hotel and flight booking services.
- Integrated multiple external travel service providers into a unified backend flow.
- Improved backend stability and data consistency across service integrations in a multi-service environment.

Backend Engineer, Blue Bird Group

Oct 2022 – Present |

Jakarta

- Developed backend systems for **promo, loyalty, subscription, gamification, and campaign** features used in production.
- Designed and implemented high-performance promo evaluation services using **Golang** and **gRPC**.
- Improved system scalability and robustness through backend and database architecture enhancements.
- Built critical promo capabilities such as **auto-apply, pre-validation**, and optimized promo listing.
- Reduced latency and improved throughput to handle a large volume of concurrent active promotions.

Full Stack Engineer, Envmission

May 2025 – Aug

2025 | Remote

- Designed and developed a waste tracking product used by multiple tenants and field operation teams.
- Built backend services using **Golang** and frontend applications using **Next.js**.
- Implemented real-time notifications to ensure timely coordination between tenants and field teams.
- Delivered a scalable, product-ready system aligned with operational workflows.

EDUCATION

Gunadarma University — BA in Information Systems

2015 – 2020 | Jakarta
